

Wastewater System Pipeline Condition Evaluation for the Municipality of Port Hope

3425 PACP Value

The PACP pipe condition grading system uses four digits to represent the highest and second highest severity grade and their total number of occurrences. There are five severity grades from 1 (lowest) to 5 (highest). If the total number of occurrences exceeds 9, then alphabetic characters are used as follows: A = 10 - 14, B = 15 - 19, C = 20 - 24, etc.

First digit (3): the highest severity grade
 second digit (4): the total number of occurrences of the highest severity grade
 third digit (2): the second highest severity grade
 fourth digit (5): the total number of occurrences of the second highest severity
